Smørum Nordre Gade 9B, 2765, Smørumovre, Denmark

Permanent Danish residency · Fluent English, Conversational Danish

Profile

I have a strong instinct for finding what doesn't add up, in spreadsheets, in model outputs, in chain-of-thought reasoning, and I find it interesting rather than frustrating. My MSc thesis put that instinct to work on DeepSeek R1, and found it would change its answer in response to a hint without ever mentioning the hint in its reasoning. The model wasn't lying exactly, it just wasn't telling the whole story, which felt like familiar territory.

Most of my career, even the parts that don't look like data science on paper, has involved the same question: is this system actually doing what we think it's doing, and what happens to the person it gets wrong about? I'd like to keep asking that question somewhere it can do some good.

I work best on problems that don't have a clean answer yet, with people who'll tell me honestly when I've got something wrong. I'd rather be somewhere people disagree productively and push things forwards, than somewhere everyone nods along. I'm told I ask a lot of questions. I'd call it thoroughness.

Education

MSc Data Science

2023 – 2025

ITU Copenhagen

Selected courses: Advanced Applied Statistics; Advanced Machine Learning; Advanced Robotics; Foundations of Game AI, Data Wrangling and Visualising

Research project: Investigating Comparison Reasoning Skills in an LLM

Thesis: [Examining the Faithfulness of DeepSeek R1's Chain-of-Thought Reasoning](#)

Published in the ACL Anthology, IJCNLP-AACL 2025, CHOMPS workshop.

BSc Data Science

2020 – 2023

ITU Copenhagen

Thesis: Carbon Footprint of Machine Learning Competitions with Medical Images

Key Skills

Technical: Python, SQL, machine learning, statistical analysis, LLM evaluation, chain-of-thought analysis, explainability, prompt engineering, Git, Docker, Linux, data wrangling, visualisation

Professional: Teaching and technical communication, root cause investigation, training and onboarding, process improvement, stakeholder collaboration, accuracy under pressure

Experience

Housekeeping & Admin Assistant

Sept 2025 – present

AC Bella Sky, Copenhagen

- Managed payroll and operational data supporting hotel operations
- Monitored performance metrics and investigated discrepancies
- Coordinated across operational teams to ensure data accuracy and process consistency

Teaching Assistant — BSc & MSc Data Science

Jan 2023 – Jun 2025

ITU Copenhagen

- Supported teaching across machine learning, statistics, large-scale data analysis, data wrangling, and algorithmic fairness
- Led tutorials, coding sessions, and project supervision for BSc and MSc students
- Guided model development, evaluation, and debugging using Python, Git, and ML libraries
- Explained core concepts including overfitting, bias, interpretability, and statistical inference

Income and Payments Assistant

Nov 2018 – Aug 2020

East Devon District Council, UK

- Managed financial data and payment processes across departments, ensuring accuracy and compliance
- Improved tracking workflows and maintained documentation standards supporting transparency and collaboration

Admin / Cash Office Manager

Jul 2009 – Nov 2018

Morrisons, Exeter, UK

- Led the cash office function in the highest-performing store in the area, which was selected as the pilot site for rollout of a new cash office system
- Supported system implementation across lower-performing stores during regional rollout, including on-site training and transition support
- Maintained high levels of accuracy and operational consistency in cash handling, reporting, and compliance
- Later moved to one of the supported stores as Cash Office / Admin Manager, stabilising processes and improving operational performance

About me

- Once covered a cash office floor in bubble wrap. We got all the work done and we still talk about that day 15 years later.
- Trained as a breastfeeding peer supporter, mostly telling new parents that whatever their baby was doing was probably normal
- Helped build a cob roundhouse and learnt to thatch the roof. I nearly fell off, my jeans did not survive and I then found out I was 20 weeks pregnant
- Bayes theorem is one of my favourite things to explain. I love the moment someone's first instinct turns out wrong and they have to actually think
- My daughters were guinea pigs for my TA explanations. If it clicked for a 9 and 12 year old, it would click for a room of adults
- Star Trek nerd. TNG vs DS9 is one of my favourite comparisons. Voyager is my actual favourite, and I will defend that choice
